

Human-Robot Interaction (HRI) Symposium

Human-Robot Interaction (HRI) is a quickly growing and very interdisciplinary research field. Its application areas will have an impact not only economically, but also on the way we live and the kinds of relationships we may develop with machines. Due to its interdisciplinary nature, different views and approaches towards HRI need to be nurtured. In order to help the field to develop, this symposium will encourage submissions in a variety of categories, thus giving this event a unique character. The symposium will consist of paper presentations, panels and, importantly, much time for open discussions which will distinguish this event from regular conferences and workshops in the field of HRI.
