

Content

Jackie Chappell and Susannah Thorpe. AI-Inspired Biology: Does AI Have Something to Contribute to Biology?	1
Raúl Arrabales, Agapito Ledezma and Araceli Sanchis. On the practical nature of artificial qualia	8
Bart Baddeley, Paul Graham, Andrew Philippides and Philip Husbands. Route Learning Through Classification	14
Luisa Damiano and Lola Cañamero. Constructing Emotions: Epistemological groundings and applications in robotics for a synthetic approach to emotions	20
Frank Guerin. Advancing Knowledge of Cognitive Development Sequences in Infancy	29
Christoph Böhme and Dietmar Heinke. Modeling visual Affordances: The Selective Attention for Action Model (SAAM)	37
Martin Hülse and Mark Lee. The Logic of Robotics Inspired Biology	43
Dean Petters and Everett Waters. AI, Attachment Theory and Simulating Secure Base Behaviour: Dr. Bowlby meet the Reverend Bayes	51
Zoe Demery, Veronica Arriola Rios, Aaron Sloman, Jeremy Wyatt and Jackie Chappell. Construct to Understand: Learning through Exploration	59
Alexey Gribovskiy, Francesco Mondada, José Halloy and Jean-Louis Deneubourg. The PoulBot: a mobile robot for ethological studies on domestic chickens	62
Verena Kersken, Juan-Carlos Gómez and Klaus Zuberbühler. Context-Specific Vocalisations in Human Infants (Homo sapiens): Can Computer Modelling Help to Bring Further Insight into Categorical Perception?	64
Emilian Lalev. Generation of Biological Motion Patterns and Their Emergent Transitions with a Trainable Neural Network Oscillator	67

Thomas Parslow, Andrew Philippides and Paul Graham. Innate movement strategies for view-based homing	69
Michael Zillich, Michael Baumann, Wolfgang Knefel and Christoph Längauer. Corvid: A Versatile Platform for Exploring Mobile Manipulation	71
Mary Felkin and Yves Kodratoff. Modelising H-CogAff global alarm system improves robot performance	73
Fawad Jamshed and Christian Huyck. Grounding Symbols: Learning and Grounding 2D Shapes using Cell Assemblies that emerge from fLIF Neurons	81
Aaron Sloman. The Design-Based Approach to the Study of Mind (in humans, other animals, and machines) Including the Study of Behaviour Involving Mental Processes	87
Margaret Boden. What's Life Got To Do With It? (Invited speakers)	95
Margaret Boden. Chapter 17: What Next? (Invited speakers)	103
Richard Cooper. Forward and Inverse Models in Motor Control and Cognitive Control (Invited speakers)	108
Richard Lewis, Satinder Singh and Andrew Barto. Where Do Rewards Come From? (Invited speakers)	111
Kim Bard. Social Cognition: Views from developmental and comparative psychology, and robotics on the role of emotion in joint attention (Invited speakers)	117
Nick Chater. Biological and cultural foundations of human language: Insights from computer simulations (Invited speakers)	118
Antje Meyer. The role of vision and attention in language processing (Invited speakers)	119

Anil Seth. Causal Networks in Neural Systems: from Brain-Based Devices to Consciousness (Invited speakers)	120
Murray Shanahan. Why Can't We Build Robots that are as Clever as Crows? (Invited speakers)	121
